Lab II Guide : Getting Started with Cloud Marketplace

Overview

In this lab, you use Google Cloud Marketplace to quickly and easily deploy a LAMP stack on a Compute Engine instance. The Google Click to Deploy LAMP Stack provides a complete web development environment for Linux that can be launched in one click.

Component	Role
Linux	Operating system
Apache HTTP Server	Web server
MySQL	Relational database
PHP	Web application framework
phpMyAdmin	PHP administration tool

Objective

Learn how to launch a solution using Cloud Marketplace.

Task 1. Sign in to the Google Cloud console (Ignore if this is done)

For each lab, you get a new Google Cloud project and set of resources for a fixed time at no cost.

1. Click the **Start Lab** button. If you need to pay for the lab, a pop-up opens for you to select your payment method.
2. Review the **Lab setup and access** panel on the right. It contains the **Open Google Cloud console** button, the temporary username and password for this lab, and any other information you need. The lab timer near the top of the page shows the remaining time.
3. Click **Open Google Cloud console**. If you are using Chrome, you can right-click and select **Open Link in Incognito Window**. The lab spins up resources and opens another tab with the **Sign in** page.
4. Tip: arrange the lab tab and the console tab in separate windows, side by side.
5. If you see the **Choose an account** dialog, click **Use Another Account**.
6. Copy the **Username** from the Lab setup and access panel, paste it into the Sign in dialog, and click **Next**.
7. Copy the **Password** from the Lab setup and access panel, paste it into the Welcome dialog, and click **Next**.

8. Click through the remaining pages: accept the terms and conditions, do not add recovery options or two-factor authentication (this is a temporary account), and do not sign up for free trials.
9. Wait a few moments for the Google Cloud console to open in this tab.

Important: You must use the credentials the lab provides. Do not use your own Google Cloud account credentials, as using your own account may incur extra charges.
Note: To see a list of Google Cloud products and services, click the **Navigation menu** at the top left, or type the product name in the **Search** field.

Task 2. Use Cloud Marketplace to deploy a LAMP stack

1. In the Google Cloud console, open the **Navigation menu** and click **Marketplace**.
2. In the search bar, type **LAMP** and press **ENTER**.
3. In the search results, click **LAMP**, by **Google Click to Deploy** if not then select **LAMP Stack Server on Ubuntu 26.04** . If you choose a different LAMP stack, the lab instructions may not work as expected.
4. On the LAMP page, click **GET STARTED**.
5. On the **Agreements** page, check the box for **Terms and agreements**, then click **AGREE**.
6. In the **Successfully agreed to terms** pop-up, click **DEPLOY**.
7. If prompted, click **Enable** for the **Compute Engine API** and the **Infrastructure Manager API**.
8. For **Zone**, select the deployment zone shown in your Lab setup and access panel.
9. For **Machine Type**, select **E2** as the Series and **e2-medium** as the Machine Type.
10. Leave the remaining settings at their defaults.
11. Click **Deploy**. Warnings may appear during deployment; you can disregard them for this lab.
12. Watch the deployment status in the console. It shows **lamp-1 is being deployed** and changes to **lamp-1 has been deployed** when the infrastructure is ready.
13. After the software is installed, review the summary of instance details, including the site address.

Task 3. Verify your deployment

1. When the deployment is complete, click **lamp-1-vm** and then **Details**.
2. Click the **Site Url** / NAT IP link. If the website is not responding, wait 30 seconds and try again. If you see a redirection notice, click that link to view your new site. (NOte : use http://SITEURL/NATIP
3. Confirm that a new browser tab shows a congratulations message. This confirms that the Apache HTTP Server is running as part of the LAMP stack.

Note: If you can't see the web page on a corporate laptop, exit any corporate VPN or network and try again, or enter the IP address on another device such as a tablet or phone.

Congratulations
